

Amendments to the Abstract

Please amend the Abstract of the Disclosure as follows:

~~There is provided a~~ The recording apparatus which ~~detects~~ can detect the gap between a recording head and the back surface of a recording medium and can record the optimum images according to the detected gap. To this end, ~~an~~ the ink-jet recording apparatus according to the present invention includes a carriage for serially moving a recording head, ~~a~~ position detecting means detector for detecting the position of the carriage, ~~changing~~ means an adjusting device for adjusting ~~a~~ the gap between the recording head and ~~a~~ the back surface of ~~a~~ the recording medium located at a position opposing the recording head, and ~~a~~ recognizing means unit for recognizing a state of the ~~changing~~ means adjusting device based on information from the position detecting means detector.
